Maximising energy efficiency with industry-leading Honey M technology

1MW
System

851.3 MWh
Annual Energy Output

3,772
modules

Commercial
rooftop PV
system

Rooftop installations represent a significant opportunity for businesses to increase their energy efficiency. During the installations, interaction between customers, installers, like us, and manufacturers is key to ensure a correct management and that the solution ultimately designed and implemented will produce the maximum energy yield. Working with Trina Solar and Hitachi Rail was a good example of collaboration between all parties."

Jonathan Bates
